AutoCAD and related products and services accounted for almost US\$1.7 billion in revenue for Autodesk in fiscal year 2016, of which 47% was generated in professional applications, 36% in architectural design, and the remainder in engineering applications. In the previous year, AutoCAD revenues were just over US\$1.6 billion. The Autodesk App Market supports the following AutoCAD products: AutoCAD LT : A light-weight model and draft CAD application optimized for entry-level users, and designed to run on Windows operating systems. : A light-weight model and draft CAD application optimized for entry-level users, and designed to run on Windows operating systems. AutoCAD Pro: A full-featured CAD application with three applications: a drafting application for creating 2D drawings and 3D models, a design application for designing three-dimensional models, and a database application for maintaining a large project database. Visual LISP Visual LISP is an AutoCAD extension language (macro language) which allows the creation of macros (a kind of user written application) that are embedded into a drawing. Macros can be used to manipulate or automate the creation of a drawing by direct manipulation of the drawing objects, such as a line, arc, circle, ellipse, or polyline or path. AutoLISP AutoLISP is a variant of Visual LISP, which was used in AutoCAD LT. Visual Basic for Applications (VBA) Visual Basic for Applications (VBA) is a very simple language that enables the integration of programming languages with graphical user interfaces (GUI). It was used in AutoCAD since version 16. Visual Basic for Applications (VBA) allows the automation of most drawing tasks. For example, the design of a drawing can be automated by moving, rotating or scaling objects in a drawing. Since AutoCAD 2000, VBA can be used to control the database of drawings through the command line interface (CLI) and launch the application from a shortcut. VBA provides the ability to perform a number of tasks on the screen such as moving, rotating, scaling, transforming and measuring objects on the screen. The script may also launch AutoCAD or open a specific drawing in the application. AutoLISP AutoLISP is a variant of Visual LISP, which was used in AutoCAD LT. AutoLISP is an extension of Visual LISP, which was used in AutoCAD LT. It is a variant of the Visual LISP language. AutoLISP support many editing commands and processing commands. It can be used to edit drawing objects or to manipulate objects during a drawing session. Click on "Save the Key" I hear you loud and clear, and I'm not really looking for answers, but I'm curious if any of you have plans on drafting RW Patrick Marleau? Like I said before, we got way too many centres with Tomas Holmstrom being placed on long-term injured reserve, and the log jam at the wings has me a bit concerned. I don't really like the idea of trading away someone of his calibre or perhaps, putting him on LTIR, but I suppose with a salary cap, the Blackhawks should be able to fit the cap hit of \$5.3M between Bryan Bickell and Patrick Kane, while also adding depth at the wings, and since they have a shortage of centres, maybe it's worth it to get rid of some dead weight at the position. If we can't get a trade done, how about just drafting RW Patrick Marleau? I'm not really looking to get rid of him, but, like I said, we have a logjam at the wing and Marleau's \$5.3M cap hit would make sense to fit a few contracts at the wings. The question is, do the Blackhawks have a shot of getting a good top six forward in the next year or two? Personally, I'd love to see the Hawks grab Cam Fowler or Alex Galchenyuk in the first round, but with Montreal and Los Angeles being the final two teams standing, I have a feeling it might be tough to get either one of them if they're still available when the draft rolls around. Anyone with thoughts on this? Do the Blackhawks have a shot of getting a good top six forward in the next year or two? I don't really think the Hawks have much of a shot at a top 6 forward, even if we assume something like Galchenyuk will be available at 24. If anything, we could try to get Vancouver's Alex Burmistrov. If the Hawks are getting Kane, they may just as well get Burmist

Import feedback from your external applications, such as AutoCAD, PowerPoint or 3D CAD, and add them to your drawings. With Markup Import you can start working on your AutoCAD drawing with the external data you receive, and stay connected without worrying about closing and reopening. (video: 6:45 min.) Calculate beam-to-column ratios in plan, section and elevation views. You can specify the maximum length of the beams as you work and have it automatically computed in all drawings. When you create the dimensional model, the ratios are computed for the first time and saved for future use. (video: 3:15 min.) You can specify the allowable dimensioning tolerances as you work, and have them automatically applied in the drawing. The tolerances appear as red Xs in the drawing area. If you specify a tolerance, you can also see the entire dimensioning chain, including the selection of the input rule (ABB, linear or angular). (video: 1:30 min.) Access many tools from the new on-screen Quick Access toolbar. This toolbar contains icons that let you access most commonly used tools quickly and easily. Some of the tools you may see on the toolbar include: Draw and Modify: Create, edit and modify drawings, including lines, shapes and text objects. Interact: Add text to drawings, draw freehand and snap to points and object or set a path. Annotate: Add comments to drawings and add text boxes. Geometry: Manage, edit and convert complex geometry objects. Place: Create and place objects in drawings. Align: Move objects to align with a drawing edge, edge midpoint or other objects. Scripting: Execute AutoLISP scripts directly in the drawing area. All New User Interface for AutoCAD (video): Start drawings from the command line by using the new -cmd command. This feature lets you start a drawing from a file or from the command line. New commands help you with the most common AutoCAD tasks, such as creating a new drawing, publishing drawings, exporting or sending drawings. These commands are now fully integrated into the ribbon, making it even easier to perform common drawing tasks. You also have the ability to use the standard command line interface to create, edit or publish drawings. Get the latest information about all new features in AutoCAD through the
